Development + Deployment: Linux/Ubuntu, Git, GitHub, Heroku, Docker

Projects

TED Alert | April 2019 | Source: github.com/timevydan/TED

Security system using OpenCV facial recognition to send email notifications of unidentified visitors.

Contributions: Automated directory monitoring and emailing files as attachments. Collaborated on scripts for facial detection and server connection to an RDS-hosted database to receive recognition training images. Completed Django app testing and documentation. Led daily team standups.

My {Adjective} Story | March 2019 | Source: github.com/py-401d11-bananas/mad-lib

App to play and save collections of MadLib-like children's stories.

Contributions: Collaborated on application routing and database requests. Completed documentation.

BooketList | January 2019 | Deployed site: book-app-301.herokuapp.com/

App for extracting and saving book details from the Google Books API.

Contributions: Implemented site responsiveness from mobile to tablet to desktop views. Collaborated on API requests and processing data, as well as overall application design.

bite.log | November 2018 | Deployed site: github.com/bite-log/bite-log

Social media app to track and share favorite meals and restaurants.

Contributions: Developed a food pun randomizer. Collaborated on rendering and filtering user entries and stats, and CSS manipulation.

Education
